-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 30-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Turnlund et al-EP0689807 in view of Dang-6,471,721.

Turnlund et al-'807 (Fig. 5-10) discloses substantially the claimed invention, such as a tube-like stent 72 with openings 68 (Fig. 10) formed by laser cutting (col. 9, lines 46-52; claim 22) comprising one embodiment of a first biologically active coating/film 28 releasing a drug such as a heparin and a second surface free of a coating (Fig. 5; col. 8, lines 40-45) and another embodiment of a first biologically active coating/film 28 releasing a drug such as a heparin and a second coating 29 of a second biologically active coating/film 29 releasing a drug such as an angiopeptin (Fig. 6; col. 8, lines 46-49).

Turnlund-'807 does not disclose the stent of a metal. However, a stent made of a metal, such as a stainless steel, or a nitinol, etc ... is well-known in the art. For example, Dang-'721 (col. 3, lines 23-29) discloses a stent made of a metal such as a stainless steel or a nitinol. It would have been obvious to one of ordinary skill in the art at the time of the invention to substitute Turnlund-'807 stent made of a biodegradable material for a temporarily use in a body for a metal stent, such as a stainless steel or a nitinol, as taught by Dang-'721 as this configuration would provide a stent for a long-term use inside a body.
